

— ENVISION · INTERNAL WORKING DRAFT · JULY 2026

Dallas Go-to-Market Strategy Plan: Companion Brief

The detailed reference behind the presentation deck. Three pillars, one theme, one operating system, laddering to a full media event on Manufacturing Day, October 2027.

— THE OVERALL THEME

Made in America. Made in Dallas. Made by Envision.

Envision is the best option for more than one reason, and this plan makes sure Dallas learns every one of them, in this order:

- 1 • American made.** Manufacturing, kitting, and fulfillment at real scale, under our own roofs, with federal-grade standards behind commercial work.
- 2 • Local.** A partner down the road instead of across an ocean, with names and hometowns behind every product.
- 3 • The workforce.** Skilled team members who are blind or have low vision. It lands last, and it seals it.

Capability earns the seat. Mission closes the deal. Never the reverse. Every asset speaks all three themes; the audience in front of us decides which one gets pulled forward. Tailored to every room, hard to ignore in all of them.

— WHY NOW

The market moment: **we already are the campaign**

Made in America is not a theme we are inventing. It is a national campaign already in rotation, with full government backing: the White House produces its own manufacturing content, and the President makes American manufacturing headline news. Manufacturers of every size are joining it with brand films, warehouse anthems, and Independence Day premieres.

The crossroads advantage. Right now, businesses across the country are working out how to pivot their identity so they can call themselves Made in America, and only then will they cut a campaign. Envision does not need the pivot. We already are what they are trying to become: real domestic manufacturing, under our own roofs, with federal-grade standards. We simply have not come out with the campaign. That is a head start, and this plan spends it.

The DFW springboard. DFW is one of the largest manufacturing markets in the United States. The play is sequence, not scale: get genuinely noticed in the DFW market first, then convert that regional notice into national notice as the campaign picks up speed.

The national room. The destination is not a local open house. When we open our doors for media days, the goal is a room that reaches past DFW: national-caliber buyers, government decision makers, and the people who move purchasing at the next level.

The differentiator no competitor can copy: every product is made by skilled team members who are blind or have low vision, and their stories are ours to tell. Capability opens every conversation. The people close it.

— ONE OPERATING PRINCIPLE

Nothing we make serves only one asset

This is the difference between a list of tactics and an operating system. Every piece of this plan flows from a single source, a person and their work, outward through every channel:

A person and their project → the capability story → five assets (statement, testimonial, media story, maker story, expert content) → the co-marketing conversation with that partner → pain points → expert posts and ad copy → the shoots → social, the campaign video, and the umbrella video → events and debriefs → relationships and tiering data → hosting → October 2027.

One input, many outputs, every output depositing into the same two accounts: the Rolodex of people who show up when we ask, and the proof that we are the experts in this field. Not new to this. True to this.

— THE STRATEGY BEHIND THE STEPS

The runway, and where the plane takes off

This plan is the middle of a crawl, walk, run arc. The crawl already happened: the work itself. The contracts, the projects, the capabilities, the people. The proof exists; Dallas just does not know it yet. The walk phase is this plan, and the walk phase is the runway: every story, room, shoot, and relationship between now and October is runway construction. The campaign video launch in October 2026 is takeoff. October 2027 is cruising altitude, when the machine compounds on its own and the market comes to us.

CRAWL • DONE

Build the proof. Real contracts, real capacity, real people. Nobody is watching yet.

WALK • THE RUNWAY

Dallas gets to know us. Stories, rooms, and expertise, repeated until we are familiar. Takeoff: the October campaign video.

RUN • AFTER OCT 2027

The machine compounds. We host, we launch, and the market comes to us. The engine carries through 2028 because it compounds rather than expires.

Think of the walk phase the way a friendship forms. **Get Noticed** is the introduction: Dallas learns our name and what we are good at, one published story at a time. **Get in the Room** is the friendship: we keep showing up where they already are, month after month, and always leave something we made in their hands. Familiarity turns into liking. **Get Trusted** is when they decide we are cool: they quote us, they book us, they bring their colleagues, and eventually they hand us the stage.

The pillars interlace by design; none of them works alone. The stories give us something worth saying in every room. The rooms give every story a live audience and fill the black book. Both hand Get Trusted its raw material: bylines to point at, relationships to pitch through. And every expert appearance generates coverage that flows right back into Get Noticed. Each pass around that loop is bigger than the last: more coverage earns more rooms, more rooms earn more authority, more authority earns bigger coverage. That compounding is the scaling plan.

October 2027 is not the finish line. It is the day the walk becomes a run: the market already knows us, likes us, and trusts us, and we spend that trust on the biggest stage we have built ourselves, with a national-caliber room, on the path to hosting our own sessions and, eventually, our own conference.

— WHAT IS ALREADY IN MOTION

This plan is championed by Sebastian and Laura, and it is underway, not pending. The lunch and learn is being scheduled. The Oncor story is drafted and ready to pitch. Disability:IN late-registration outreach is in motion. The first SME focus sessions are being booked. The intake and debrief templates are being drafted. October 2 is held, and campus outreach is starting. Every dated move in this brief is a commitment, not an intention.

— THE PEOPLE ENGINE

Why this will not stall: engineered from experience

Two proof stories taught us where efforts like this slow down. Lions Club and Oncor took rounds of back and forth. Contributors are experts in their work, not marketing, so even structured questions returned generic responses without context. That is a fair outcome and a fixable one: leadership copied on an email changes nothing; active championing does. Each lesson is already engineered into the plan.

The campaign lunch and learn. Hosted by Laura, championed by Sebastian. The whole campaign explained to sales and operations in one sitting, with side-by-side examples of a strong contribution versus a generic one, so every team knows exactly what we are looking for and that the quality of their response matters. Level two: the session builds organization-wide eyes and ears. When everyone understands the play, everyone spots opportunities in the field, and the whole company speaks through the same lens.

Quarterly reinforcement. The enablement does not end at one session. Once a quarter: wins shared back, toolkits expanded with more structured scripts and asks, and the opportunity targets sharpened as the data comes in. The enablement compounds the same way the relationships do.

The champion pipeline. A champion pair named for every capability and product line: the sales or operations expert who sources the story, paired with the maker featured in it, working from structured intake templates. Cadence: one story identified per month. The Oncor vest story leads, proving the safety vest product, the cut and sew capability, and distribution in a single story.

SME focus sessions. Laura's one-on-ones with the sales and operations subject matter experts capture the pain points their customers and industries actually voice (external friction, never internal gripes). Each pain point feeds three outputs: the story angle, the expert content, and the geo-targeted ad copy. The sessions also map which expert holds which partner relationship, so the co-marketing scripts are aimed at the right doors.

The system is the fix: context from the lunch and learn, structure from the templates, and visible championing from leadership. The next ten stories will not take the road the first two did.

— THE PAIN POINT THROUGHPUT

One example shows the whole mechanic. Producing the Oncor vests meant sourcing flame-resistant material we had not used before. That single friction point becomes: the story angle inside the capability piece, an expert post ("how to source a material you have never used before"), and ad copy that speaks to sourcing friction the audience already discusses. One conversation with one SME, three channels of output, all in the expert's voice, not a brand voice.

The story engine: every story is five assets

A steady drumbeat of Envision in print. Every project and contract we already hold becomes publishable material, and each one runs through the press machine more than once. Each project is retold as proof of a service in action and published as a living project page in the Envision in Action section of the site: the story, by-the-numbers proof, and the capabilities behind it, updated as programs grow. Two stories exist so far, Lions Club and Oncor, together proving cut and sew, the safety vest line, and distribution. Every story that follows is five assets in one:

- 1 Capability statement.** Proof the service works in the real world. Sales walks buyers straight to the page, and the page becomes source material for everything downstream.
- 2 Customer testimonial.** The partner's name and results sit on the page. That is third-party validation no self-description can match.
- 3 Media story.** The same project submitted through two avenues, each pitched where its angle fits: the business story and the workforce story.
- 4 Maker story.** The person behind the product, which converts directly into the geo-targeted ad creative in Pillar 2.
- 5 Expert content.** The bottlenecks we solved become best-practices material in the SME's own voice, feeding social and the expert engine in Pillar 3.

STORY	ANGLE	FEEDS TO
The business story	Why Oncor and a 100-year-old Lions Club picked the same Texas manufacturer	Dallas Business Journal, Dallas Innovates, D CEO, IndustryWeek and trade press
The workforce story	The skilled team behind the products, told person-first	LION Magazine, NIB channels, Disability Scoop, Dallas Morning News, Community Impact, DFW local TV

Partner co-marketing, the scripted model. Every story opens a partner conversation, and we learned that what partners want from a marketing effort rarely survives being relayed secondhand. So the mechanic is precise: the sales or operations relationship holder makes the introduction using a marketing-provided script of exactly what to ask, then marketing takes the meeting directly with the partner's marketing lead to scope the rollout: co-branded internal features, rollouts through the partner's own channels, the moves that deepen the relationship and seed the next order.

Cadence commitment: one story identified per month, a named champion pair per capability and product line. Both drafted features are written and ready to pitch today.

Stories that double as ads

A recurring series, not a one-off: one maker profile per capability, service, and product line, each converting directly into geo-targeted ad creative. The formula: [Product] does its job for you. [Name] makes sure of it. Location closes. The workforce story is carried by the person, never by nonprofit language.

This is the engine that ties Get Noticed to Get in the Room: each profile is publishable content on its own, and each becomes the ad creative we fence around the events in the next pillar. And the copy is not guesswork: it is sharpened by the pain points surfaced in the SME focus sessions, so each ad speaks to friction its audience is already talking about on that floor. Two profiles are drafted; the structure repeats down the whole catalog, one line at a time.

— CAPABILITIES & SERVICES

Textile manufacturing • profiled	Bindery • profiled	Kitting & fulfillment	Print & document services
Contact center solutions			

— PRODUCTS

FR safety vests • profiled	Cut & sew apparel • profiled	High-vis apparel	Service vests
Office & writing products	etc. • one profile per line		

— WHERE THE ADS RUN

Geofenced to the room. While decision makers are at each event, the maker ads fence their phones: the venue, the hotels, the corridors between. They meet us at the booth, then see us again that night.

Placed inside the event. Alongside the fence: ad placement in the events themselves, program ads and venue screens, matched to who is on each floor.

Hyperlocal by design. The spend follows the buyers physically: trade shows, expos, and the rooms in Pillar 2, tiered by the debrief data so every dollar lands where the evidence says it works.

Every profile does double duty: a story that earns coverage, and an ad that follows the right buyers into the right room, speaking the friction they already feel.

Physical presence where **Dallas buyers already gather**

EVENT	WHEN & WHERE	WHO'S IN THE ROOM	ENTRY
Disability:IN	July 27 to 30, 2026 · Dallas (venue with agenda)	Procurement and supplier diversity leaders, 990+ companies	\$2,000 affiliate / certified DOBE pass · booths from \$4,000
Circular Supply Chains Conference	August 4 to 5, 2026 · Dallas (ICFTCSC-26)	Supply chain and sustainability strategists	\$259 listener registration
IntraLogisteX USA	September 16 to 17, 2026 · Kay Bailey Hutchison Convention Center, Dallas	Supply chain and manufacturing pros: warehouse managers, heads of distribution, project leads	Free two-day pass (all content and demos)
Made in North Texas	June 2027 · Esports Stadium Arlington	DFW manufacturing leaders, hosted by the Dallas Business Journal	By invitation
SAMA Texas Manufacturing Trade Show	May 5, 2027 · Freeman Expo Hall, San Antonio	Regional manufacturers, suppliers, technology, workforce and operations	Registration TBC (SCTMA hosts)
Build Expo Dallas	August 25 to 26, 2027 · Kay Bailey Hutchison Convention Center	Construction and trades procurement	Free VIP registration

PRIME EXAMPLE · IN MOTION NOW

Disability:IN · July 27 to 30 · Dallas

Procurement and supplier diversity leaders from 990+ companies, in our backyard. The one audience where our workforce story opens the conversation instead of closing it. Registration closed on schedule July 10; within a day, late-registration contacts and committee seats were identified because the event is not sold out, and that outreach is in motion. It is a live example of how this plan treats deadlines: dated moves, and the open door found when one closes. While the event fills Dallas with 900+ leaders from around the world, our ad runs fenced to the venue and hotels. The trade show leave-behind is the pen box, made on our own lines.

Every event, wherever it is, feeds the same system. Attendance does double duty: relationship cultivation on the floor, and market intelligence through the standardized report-back on the next page. The expos are where the ads, the relationships, and the data all meet.

— PILLAR 2 · GET IN THE ROOM · PROFESSIONAL GROUPS

In the room every month

Expos are seasonal. Professional groups put us in front of the same Dallas decision makers every month, all year. Three circles at once: join, show up consistently, and always leave something made on our own lines behind.

CIRCLE	GROUPS
Procurement & supply chain WHERE THE BUYERS ARE	ISM-DFW · CSCMP DFW Roundtable · ASCM / APICS North Texas · DFW Minority Supplier Development Council
Manufacturing & innovation WHERE WE BELONG AS A PEER	Dallas County Manufacturers Association (300+ manufacturers) · TMAC Metroplex (gateway to NTMA and PMA) · American Supply Chain Summit network (Dallas 2027)
Disability employment WHERE OUR MISSION IS THE CREDENTIAL	North Texas Disability Chamber · Disability:IN Dallas network · Blind Professionals Network Dallas · TWC Vocational Rehabilitation business team

— THE TACTIC FOR THESE ROOMS

A business card that demos itself

The fold-down card carrier, pocket-size, made start to finish on our own print line.

1 · Hand it over. Reads like a business card: the first proof.

2 · Flip it. The back carries the pitch in one line and the QR code.

3 · Fold it down. The full capability list unfolds, tagged KS / TX / US. Scan the QR and the card reads itself aloud in an Envision employee's voice: accessibility, demonstrated in the handshake.

— MICHELLE BURGESS · THE NINETY-DAY ACCELERANT

Michelle is with us for a limited window, so her time goes exclusively where only she can accelerate: **cultivating buyer and partner relationships and building the black book.** Her Dallas Business Journal relationships open three placement avenues through one door, the Dallas Business Journal, Dallas Innovates, and Made in North Texas, giving the Oncor story its first placement vehicle. She also helps open the collegiate audiences for Manufacturing Day outreach. July and early August are the window: initial connections made on the Dallas trip and around Disability:IN, then the August rooms work builds on every introduction she opens.

The report-back and the tiering engine

Every expo or professional group any Envision sales or operations team member attends, in Dallas or anywhere, closes with the same short, standardized debrief. It takes minutes to file and turns every trip, every badge, and every booth conversation into structured market intelligence.

— THE DEBRIEF FIELDS

Who was in the room	Who we talked to	What topics came up
What other audiences were present	Wins	What could have been better

Events earn their tier. Over a few cycles, the debriefs build the evidence that tiers every event: **invest** (geofenced ads, program placement, venue screens, a booth), **attend** (presence only), or **drop** (not worth the time or money). Advertising and booth dollars follow data, not habit, and when anyone asks why we are spending at a given event, the answer is three debriefs deep.

A proprietary read on the DFW market. The debriefs compound into something no competitor has: a first-hand map of who actually shows up where, what they talk about, and which rooms hold our buyers. That intelligence shapes how we advertise to each room and which audiences we build for next.

Gaps become tools, on marketing's terms. Contributors report what happened and what was missing; marketing decides the instrument. The toolkit stays at the caliber of the card carrier: pieces that demonstrate the capability in the handshake. The answer to a gap is never a flyer.

This is what makes "we review the data and pivot" a mechanism instead of a promise. The pain points tell us what converts. The debriefs tell us where to invest. Together they steer year two: what to shoot, what to write, what to fence, and what to fund.

From attention and access to authority

The first two pillars earn attention and access. This one turns that into authority: Envision's people positioned as the subject matter experts on domestic manufacturing, fulfillment, and inclusive workforce, until the field stops seeing a vendor to evaluate and starts seeing the voice to book.

1 • Publish as experts. A steady cadence on LinkedIn and social, and the voices are the sales and operations subject matter experts themselves, sourced through Laura's one-on-one focus sessions on customer pain points, with leadership amplifying. Each post takes a real question buyers face on reshoring, supply chain resilience, kitting, or inclusive workforce and answers it with authority. Each expert post pairs with its story: friction and resolution. Not brand posts, expertise.

2 • Stack the proof. Owned content plus the earned coverage from Get Noticed: a byline in IndustryWeek plus a consistent expert voice online is a credential no sales deck can buy.

3 • Convert to the mic. Podcast guest spots and panel invitations, pitched with the relationships built in Get in the Room. Targets: Manufacturing Happy Hour, MakingChips, The Manufacturing Executive, Manufacturing Talk Radio, Gemba Academy Podcast, Disability:IN sessions, NIB and AbilityOne stages.

4 • Host the room. The goal state: the conferences we geofenced and walked invite us back to lead the session. We set the agenda instead of working the floor, on the road to hosting a conference of our own.

This loops back to the start: experts get published more, and published experts get invited into more rooms. The Rolodex logic runs underneath all of it: media contacts and professional organizations cultivated into people who show up when we ask, across stories, panels, the walk, and the media days.

— FIRST CAMPAIGN • AMERICAN MANUFACTURING DAY • OCTOBER 2026

The first hosted proof of expertise, a mini media day aimed at college students and young adults, framed exactly as it is: Envision educating the next generation because we are the experts in this field.

Cultivate. In-class visits and Get in the Room relationships, with Michelle helping open the collegiate doors, bring colleges and young adults out to campus.

Host. Interactive tour with mini sessions taught by our own leaders. Outside experts get a stage too.

Cover. Get Noticed press plus the colleges' own channels. Film everything.

Convert. Footage and coverage position our people as speakers at the very expos and groups we attend.

Target campuses: Dallas College Brookhaven (Farmers Branch), UT Dallas, UT Arlington, University of North Texas, SMU, Texas Woman's University, Paul Quinn College.

— THE SATURATION MONTH

October by design

Manufacturing Day, the campaign video, and White Cane Day Walk share one month on purpose. That is saturation, not collision. Frequency is what gets a brand picked up: three touches in thirty days beats three touches across a year, each event warms the audience for the next, and an outlet that runs one Envision story gets handed the follow-up while the first is still fresh.

OCTOBER 2

Manufacturing Day

The mini media day. College students on campus, Envision educating the next generation as the experts in this field. Likely the first news story of the month. Everything filmed.

MID-OCTOBER

The campaign video

The Made in America campaign video launches: agency-produced, storyboarded, with production logistics carried externally. Takeoff for the whole runway.

OCTOBER 17

White Cane Day Walk

Dallas Zoo. Everyone from Manufacturing Day, press, colleges, and partners, personally invited while the relationship is warm. The manufacturing story hands its audience to the mission story.

— HOW THE LOAD IS ANSWERED

The agency carries the video. Storyboarding, production, and logistics sit with an outside agency. That is the one major investment in this plan, and it is exactly where investment belongs: the umbrella-level asset everything else pulls cuts from.

Everything internal is banked by September. The preliminary shoot on the July Dallas trip feeds the first Made in America social teasers. The formal September shoot covers the factory floor and the office services upstairs. Every frame does triple duty: social, the campaign video, and the future organization-wide umbrella video.

Nothing waits on the agency. The stories, the rooms, the sessions, the teasers: all of it starts now and runs while the video is in production. October is execution and press, not production.

The campaign video and the organization-wide umbrella video are separate deliverables with one shared bank of footage. Every updated frame we shoot serves both, plus social in between.

— THE INVESTMENT

The money, and the ecosystem

RUN-RATE SPEND

Small, legible, recurring

Travel to events and the Dallas trips. Attendance and registration fees. Occasional ad placements and boosts: the geofences, the program ads, the venue screens. Every dollar tiered by the debrief data as it accumulates.

THE ONE INVESTMENT

The agency-produced campaign video

Storyboarded and logistics-managed externally, so a small internal team is never the bottleneck on the flagship asset. Nothing internal waits on it; every other move is already underway while it is in production.

— ONE ECOSYSTEM

This commercial campaign and the foundation's emerging direction speak the same two languages: the impact is North Texas, and the mission is the people. That is not a coincidence; it is the same organization telling the same truth to two audiences. So nothing here runs parallel to the development side. Footage flows both ways. Stories flow both ways. Momentum flows both ways. The campaign video, the maker stories, and the October media moments all feed the same cohesive ecosystem, and the ecosystem feeds them back.

— WHAT SUCCESS LOOKS LIKE BY OCTOBER

Stories: one identified per month, a named champion pair per line, the Oncor story placed through the Dallas Business Journal family.

Expertise: first SME expert posts live within 30 days of the lunch and learn, pairing friction and resolution with each story.

Relationships: the black book started through Michelle's window, names added every month through the rooms, debriefs filed for every event.

Assets: a banked library covering every capability by the end of September, feeding social, the campaign video, and the umbrella video.

October: campuses confirmed, the video live with an engagement baseline set, and walk invitations delivered while the relationships are warm.

— LOOKING FORWARD

The road to October 2027

NOW • CONTINUOUS

The enablement cycle (lunch and learn, then quarterly), the story engine, and the SME focus sessions feeding stories, expert content, and ad copy monthly. Get Noticed and Get in the Room run in parallel: coverage from every project, presence at events and groups, geofenced maker ads at each appearance.

JULY 2026

Disability:IN in Dallas: the first Get in the Room move and the start of the supplier diversity black book. Michelle Burgess cultivates the first buyer and partner relationships and opens the Dallas Business Journal family for the Oncor placement. The preliminary shoot feeds the first Made in America social teasers.

SEPTEMBER 2026

The formal photo and B-roll shoot: factory floor and the office services upstairs. The full asset library is banked before the saturation month begins.

OCTOBER 2026

The saturation month. Manufacturing Day mini media day with colleges and young adults, everything filmed. The agency-produced Made in America campaign video launches: takeoff. The warm hand-off carries the whole audience to White Cane Day Walk.

LATE 2026 TO MID 2027

The same cycle repeats at bigger scale. Quarterly enablement sessions compound the organization. Data reviews double down on what works and pivot on what does not, with event tiering from the debrief data deciding where booth and ad dollars go. Relationship cultivation compounds the Rolodex of people who show up when we ask. The heritage product concept matures to launch-ready.

OCTOBER 2027

Manufacturing Day as a full media event: warm press, established experts, and a cultivated network in the room, and because DFW notice has converted to national notice, the room reaches past DFW to national-caliber buyers and decision makers. First full year of the Made in the USA push. Possible heritage product launch, possibly tied to NIB 2027 (to explore). The next stage: hosting our own sessions, and eventually a conference of our own.

Everything in this brief is the runway. The campaign video is takeoff. October 2027 is cruising altitude. And the engine carries through 2028 and beyond, because nothing in it expires: the stories keep publishing, the debriefs keep tiering, the enablement keeps compounding, and the Rolodex keeps growing. Get Noticed. Get in the Room. Get Trusted. Then host.

Dallas go-to-market strategy plan · companion brief to the presentation deck · internal working draft, July 2026 ·
championed by Sebastian and Laura
